Early Talent Programs

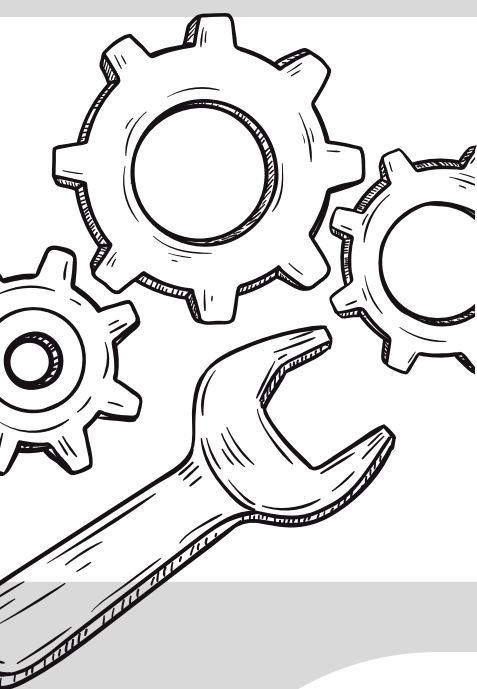

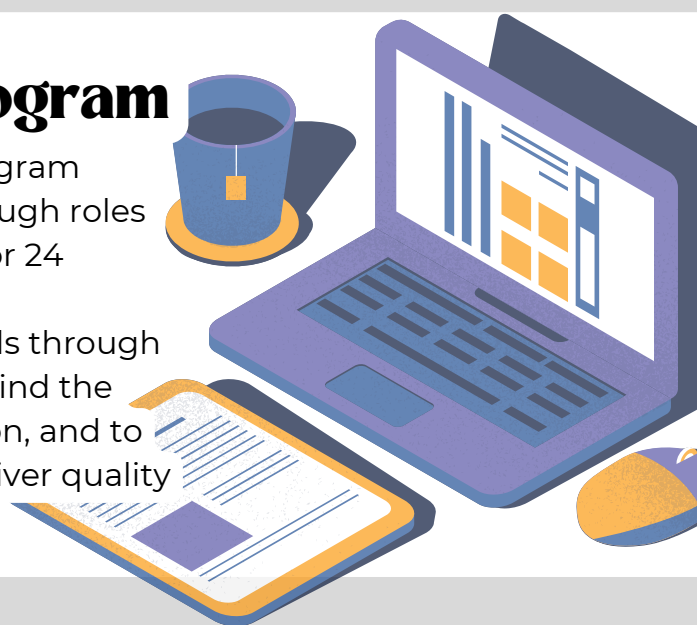

Summer Growth Experience

If you're currently a college student, this is your chance to gain impactful work experience during the summer. Located in one of our many sites across the United States, you'll work on challenging real-world projects, and collaborate at all levels for maximum exposure.

Digital Rotational Program

If you're a college graduate, this program offers the opportunity to rotate through roles in Pfizer Digital every 6-12 months for 24 months. Graduates accelerate the development of knowledge and skills through experiences within Pfizer Digital to find the best fit for them and the organization, and to find new and innovative ways to deliver quality Digital solutions to Pfizer.

PGS Rotational Program

This two-year entry-level program is designed to provide recent college graduates accelerated training through real world, hands-on experience associated with roles and projects needed to support the business while promoting personal and professional growth for participants. These full-time roles cross over all facets of our business including operations, engineering, quality, supply chain and logistics.

R&D Rotational Program

This program is for promising science, technology, engineering, and math (STEM) college graduates. Via six-month rotations, you'll be immersed in different aspects of our pharmaceutical R&D business, and work with our scientists, clinicians and R&D professionals on meaningful, impactful assignments.

MBA Summer Associate Program

We're giving first year MBA students the chance to be future Pfizer leaders. This summer program will see you make your mark on challenging business-driving projects, in one of our many United States locations. Placed in either Analytics, Corporate Finance, Strategy and Consulting or Pharmaceutical Marketing, you'll receive a competitive salary, housing support options and the potential of a full-time role on completion of your MBA.
